**Exon Definition.** An exon is a coding region of a gene that contains the information required to encode a protein. In eukaryotes, genes are made up of coding exons interspersed with non-coding introns. These introns are then removed to make a functioning messenger RNA that can be translated into a protein.**Exon Structure**

The figure shows the structure of the Lac operon and the adjacent lacR repressor gene. The Lac operon is also under positive gene regulation. While the removal of the repressor protein in the presence of lactose is required for synthesis of the lacZ, lacY, and lacA genes, the gene expression will remain low.

Biology is the natural science that studies life and living organisms, including their physical structure, chemical processes, molecular interactions, physiological mechanisms, development and evolution. Despite the complexity of the science, there are certain unifying concepts that consolidate it into a single, coherent field. Biology recognizes the cell as the basic unit of life, genes as ...

In biology, taxonomy (from Ancient Greek τάξις (), meaning 'arrangement', and -νομία (), meaning 'method') is the science of naming, defining (circumscribing) and classifying groups of biological organisms on the basis of shared characteristics. Organisms are grouped together into taxa (singular: taxon) and these groups are given a taxonomic rank; groups of a given rank can be ...

a sudden change in the environment (e.g. an earthquake, flood, or fire) that drastically reduces the size of a population. The few survivors that pass through the restrictive bottleneck may have a gene pool that no longer reflects that original population's gene pool. E.g. the population of california condors was reduced to 9 individuals.

Nitrifier denitrification is the pathway of nitrification in which ammonia (NH<sub>3</sub>) is oxidized to nitrite (NO<sub>2</sub><sup>-</sup>) followed by the reduction of NO<sub>2</sub><sup>-</sup> to nitric oxide (NO), nitrous oxide (N<sub>2</sub>O) and molecular nitrogen (N<sub>2</sub>). The transformations are carried out by autotrophic nitrifiers. Thus, nitrifier denitrification differs from coupled nitrification-denitrification, where denitrifiers ...
