This is a very vague question so I'll try to cover the basics sodium chloride is NaCl If you want a dissociate equation it'll be written as follows: $\text{NaCl(aq)} \rightarrow \text{Na}^+(\text{aq}) + \text{Cl}^-(\text{aq})$

What is the balanced equation for sodium chloride? | Socratic

Osmolarity refers to concentration in terms of moles per litre of solution, whereas osmolality refers to concentration in terms of moles per kilogram of solvent. For dilute solutions, however, they are numerically almost the same. Osmolarity is the number of osmoles per litre of solution. Osmolality is the number of osmoles per kilogram of solvent.

How are osmolarity and osmolality different? + Example

GRADES: **IF YOU MADE A 'D' in chem 101, you really should consider retaking chem 101 or have a very good reason for this score if you decide to continue in chem 102. Ideally, you want to have all of the concepts from chem 101 firmly understood, so you can go on to chem 102. I will always remind you of the concepts we are building on, so you can review the material if you need to.

Here is a list summary of all the cosmetic science courses outlined below. We frequently get asked her on Chemists Corner about cosmetic science programs that teach you to become a cosmetic chemist in the cosmetic industry or even to just formulate your own products. So much so that we created our ...

Cosmetic Science Programs Around the World - Chemists Corner

Chloroform (CHCl₃) is a colourless, dense liquid that is immiscible with water at room temperature and pressure. Popularised by movies and dramas, it is often cited as an incapacitating agent in popular culture. Chloroform was used as a general anaesthetic due to its ability to depress the central nervous system, a property that was discovered in 1842.
