Lenz's law (pronounced / ' l ɛ n t s /), named after the physicist Emil Lenz who formulated it in 1834, states that the direction of the current induced in a conductor by a changing magnetic field is such that the magnetic field created by the induced current opposes the initial changing magnetic field. Or, as summarised by D.J. Griffiths: . Nature abhors a change in flux.

Electromagnetic or magnetic induction is the production of an electromotive force (i.e., voltage) across an electrical conductor in a changing magnetic field.. Michael Faraday is generally credited with the discovery of induction in 1831, and James Clerk Maxwell mathematically described it as Faraday's law of induction. Lenz's law describes the direction of the induced field.

In fisica, la legge di Lenz, formulata dal fisico russo Heinrich Friedrich Emil Lenz nel 1834, è una conseguenza del terzo principio della dinamica (di azione e reazione) e della legge di conservazione dell'energia che determina la direzione della forza elettromotrice risultante dall'induzione elettromagnetica in un circuito elettrico. La legge stabilisce che la variazione temporale del flusso ...

La fuerza asociada a la presión en un fluido ordinario en reposo se dirige siempre hacia el exterior del fluido, por lo que debido al principio de acción y reacción, resulta en una compresión para el fluido, jamás una tracción.; La superficie libre de un líquido en reposo (y situado en un campo gravitatorio constante) es siempre horizontal.
