Classifications. Organic chemistry has a strong tradition of naming a specific reaction to its inventor or inventors and a long list of so-called named reactions exists, conservatively estimated at 1000. A very old named reaction is the Claisen rearrangement (1912) and a recent named reaction is the Bingel reaction (1993). When the named reaction is difficult to pronounce or very long as in ...

Atoms. The multiplicity is often equal to the number of possible orientations of the total spin relative to the total orbital angular momentum  $L$ , and therefore to the number of near-degenerate levels that differ only in their spin-orbit interaction energy.. For example, the ground state of the carbon atom is a 3 P state. The superscript three (read as triplet) indicates that the ...

Summary: Sigma and Pi Bonds The sigma bond is a bond between atoms within a molecule which is formed often by s orbitals overlapping along the axis connecting the joined nuclei. It is the first to form and its stability depends on how the electrons are distributed in the sigma bonding and antibonding orbitals.

Bei der Wagner-Meerwein-Umlagerung handelt es sich um eine Namensreaktion in der Organischen Chemie. Sie wurde 1899 in Kasan (Russland) von Georg Wagner (Егор Егорович Вагнер) entdeckt und ab 1914 von Hans Meerwein untersucht. Sie ist eine intramolekulare Umlagerung von Atomen oder Molekülgruppen in Carbeniumionen

Proprietà chimico-fisiche. Al contrario degli enantiomeri che hanno le stesse proprietà chimico-fisiche tranne il potere ottico rotatorio e la reattività in ambienti chirali, i diastereoisomeri hanno proprietà che possono essere totalmente differenti. D'esempio sono la solubilità, fattore sfruttabile per la separazione tramite cristallizzazione frazionata, la densità, il punto di ebollizione.

Verwendung. Die hauptsächliche Verwendung von Di-tert-butylidicarbonat ist die Einführung der tert-Butyloxycarbonyl-Gruppe ( $t$ -BOC), einer der am häufigsten eingesetzten Schutzgruppen in der organischen Chemie. Es ist die meistgenutzte Chemikalie zum Schutz von Aminofunktionen bei chemischen Reaktionen, besonders in der Peptid- und Glycopeptidchemie. ...

La reazione aldolica è una reazione in cui due molecole di un'aldeide o di un chetone, che abbiano almeno un atomo di idrogeno in posizione  $\alpha$  al gruppo carbonilico ( $C=O$ ), si combinano tra loro formando una  $\beta$ -idrossialdeide o un  $\beta$ -idrossichetone. Inoltre, il prodotto formatosi, comunemente chiamato aldolo, essendo molto instabile, può disidratarsi, ossia perdere una molecola di acqua e ...
