Simple Genetics Practice Problems KEY This worksheet will take about 20 minutes for most students, I usually give it to them after a short lecture on solving genetics problems. I don't normally take a grade on it, instead just monitor progress of students as they work and then have them volunteer to write the answers #5-15 on the board.

Lab 8 Population Genetics. This is the allele frequency. An equation called the Hardy Weinberg equation for the allele frequencies of a population is $p^2 + 2pq + q^2 = 1$. P represents the A allele frequency. The letter q represents the a allele. Hardy and Weinberg also gave five conditions that would ensure the allele frequencies of a population would remain constant.

The frequency of the recessive allele in the population. Answer: We know from the above that q^2 is $1/2,500$ or 0.0004 . Therefore, q is the square root, or 0.02 . That is the answer to our first question: the frequency of the cystic fibrosis (recessive) allele in the population is 0.02 (or 2%). The frequency of the dominant allele in the population.
