Jest's configuration can be defined in the package.json file of your project, or through a jest.config.js file or through the --config <path/to/js|json> option. If you'd like to use your package.json to store Jest's config, the "jest" key should be used on the top level so Jest will know how to find your settings:</p>

Mathematically, that's strange. The last result states that "null is greater than or equal to zero", so in one of the comparisons above it must be true, but they are both false. The reason is that an equality check == and comparisons > < >= <= work differently. Comparisons convert null to a number, treating it as 0. That's why (3) null >= 0 is true and (1) null > 0 is false.

Recursion (adjective: recursive) occurs when a thing is defined in terms of itself or of its type. Recursion is used in a variety of disciplines ranging from linguistics to logic. The most common application of recursion is in mathematics and computer science, where a function being defined is applied within its own definition. While this apparently defines an infinite number of instances ...
