Ap Bio Plant Hormone POGIL | Essay Example

Plant hormones help coordinate growth, development, and responses to stimuli. A hormone is a signaling molecule produced in small quantities in one part of the body, and is then transported to other regions where it can bind to specific receptors and trigger a response. The hormone concept, which was originally derived from animal studies, was adapted to fit plants.

Plant Hormones - AP Bio Plants Review

Auxin itself wasn't discovered until the late 1920s, and it was the first of the 5 major types of plant hormones to be studied. Auxin has lots of jobs but most importantly it stimulates growth, and if a plant doesn't naturally produce auxin itself, it will die.
