1 Mechanical Equilibrium 1 1-1 Forces in Equilibrium Vocabulary Force: A push or a pull. A force is needed to change an object's state of motion. The downward force acting on an object is called weight, while any stretching force on an object (such as a force exerted by a rope or wire) is called tension. The SI (Système International) unit for force is the newton (N).

If an object is at rest and is in a state of equilibrium, then we would say that the object is at "static equilibrium." "Static" means stationary or at rest. A common physics lab is to hang an object by two or more strings and to measure the forces that are exerted at angles upon the object to support its

weight.
