In real life one can find explicit solutions of very few PDEs – and many of these are infinite series whose secrets are complicated to extract. For more than a century the goal is to understand the solutions – even though there may not be a formula for the solution. The historic heart of the subject (and of this course) are the three fun-

Observe that all three PDE mentioned above satisfy the following simple property called the principle of superposition: If u_1, u_2 are solutions of an equation so is any linear combination of them $\lambda_1 u_1 + \lambda_2 u_2$ where λ_1 and λ_2 are arbitrary real numbers. Such equations are called linear. The following equation, called the minimal surfaces
