As depicted in Fig. 1(a), the OR was firstly ventilated by a vertical LAF unit at an airflow rate of 12,000 m³ / h, equivalent to 100 air changes per hour (ACH). Clean air was supplied to the OR from a ceiling diffuser that measures 2.78 m × 2.78 m and results in a supply air velocity of 0.43 m/s.

Numerical representations of the severity of health loss associated with a health state. Derived from a worldwide, cross-cultural study to compare the relative severity of health problems, disability weights are numbers between 0 and 1 that are multiplied by the time spent living with a health loss to determine the years lived with disability associated with the cause of that loss.
