In 1991, Sumio Iijima at the NEC Laboratory in Tsukuba, Japan, discovered CNTs using the arc-discharge technique. These CNTs were then characterized using a high-resolution transmission electron microscope (HRTEM) .Chemical bonding in nanotubes is composed entirely of sp² bonds, which are stronger than the sp³ bonds found in alkanes and provide nanotubes with unique strength .

In statistics, kernel density estimation (KDE) is a non-parametric way to estimate the probability density function of a random variable. Kernel density estimation is a fundamental data smoothing problem where inferences about the population are made, based on a finite data sample. In some fields such as signal processing and econometrics it is also termed the Parzen–Rosenblatt window method ...
