Newton's law of universal gravitation states that every particle attracts every other particle in the universe with a force which is directly proportional to the product of their masses and inversely proportional to the square of the distance between their centers. This is a general physical law derived from empirical observations by what Isaac Newton called inductive reasoning.

### **Newton's law of universal gravitation - Wikipedia**

English physicist and mathematician Sir Isaac Newton, most famous for his law of gravitation, was instrumental in the scientific revolution of the 17th century.

As mentioned earlier in Lesson 1, an object moving in uniform circular motion is moving in a circle with a uniform or constant speed. The velocity vector is constant in magnitude but changing in direction. Because the speed is constant for such a motion, many students have the misconception that there is no acceleration.

(2003-07-26) 0 Zero is a number like any other, only more so... Zero is probably the most misunderstood number. Even the imaginary number  $i$  is probably better understood, (because it's usually introduced only to comparatively sophisticated audiences). It took humanity thousands of years to realize what a great mathematical simplification it was to have an ordinary number used to indicate ...
