Electric Current. Electric current is the rate of charge flow past a given point in an electric circuit, measured in Coulombs/second which is named Amperes. In most DC electric circuits, it can be assumed that the resistance to current flow is a constant so that the current in the circuit is related to voltage and resistance by Ohm's law. The standard abbreviations for the units are  $1 \text{ A} = 1 \text{ C/s}$ .

Principle. The operation of the diamond anvil cell relies on a simple principle:  $p = \frac{F}{A}$  where  $p$  is the pressure,  $F$  the applied force, and  $A$  the area. Typical culet sizes for diamond anvils are 100–250 micron, such that a very high pressure is achieved by applying a moderate force on a sample with a small area, rather than applying a large force on a large area.
