The atmosphere does refract light a bit. I seem to remember that when the bottom edge of the sun seems to be at the horizon, geometrically the sun is already below the horizon, but you can still see it because of the refraction. I can't find a source right now so maybe that's complete bull.

How the power lines at Lake Pontchartrain, Louisiana, USA ...

The skull of fishes is formed from a series of only loosely connected bones. Lampreys and sharks only possess a cartilaginous endocranium, with both the upper and lower jaws being separate elements. Bony fishes have additional dermal bone, forming a more or less coherent skull roof in lungfish and holost fish. The lower jaw defines a chin.

The cerebellum (Latin for "little brain") is a major feature of the hindbrain of all vertebrates. Although usually smaller than the cerebrum, in some animals such as the mormyrid fishes it may be as large as or even larger. In humans, the cerebellum plays an important role in motor control. It may also be involved in some cognitive functions such as attention and language as well as in ...
