The P versus NP problem is a major unsolved problem in computer science. It asks whether every problem whose solution can be quickly verified (technically, verified in polynomial time) can also be solved quickly (again, in polynomial time).. The underlying issues were first discussed in the 1950s, in letters from John Forbes Nash Jr. to the National Security Agency, and from Kurt Gödel to John ...

A hierarchy problem occurs when the fundamental value of some physical parameter, such as a coupling constant or a mass, in some Lagrangian is vastly different from its effective value, which is the value that gets measured in an experiment. This happens because the effective value is related to the fundamental value by a prescription known as renormalization, which applies corrections to it.

Chemical Kinetics. You may be familiar with acid-base titrations that use phenolphthalein as the endpoint indicator. You might not have noticed, however, what happens when a solution that contains phenolphthalein in the presence of excess base is allowed to stand for a few minutes.

Course Overview. Information is something that can be encoded in the state of a physical system, and a computation is a task that can be performed with a physically realizable device. Therefore, since the physical world is fundamentally quantum mechanical, the foundations of information theory and computer science should be sought in quantum physics.

Overview. The Two-Source Hypothesis (2SH) has been the predominant source theory for the synoptic problem for almost a century and half. Originally conceived in Germany by Ch. H. Weisse in 1838, the 2SH came to dominate German protestant scholarship after the fall of the Tübingen school with H. J. Holtzmann's endorsement of a related variant in 1863.

Buffon's needle problem asks to find the probability that a needle of length  $l$  will land on a line,

given a floor with equally spaced parallel lines a distance  $d$  apart. The problem was first posed by the French naturalist Buffon in 1733 (Buffon 1733, pp. 43-45), and reproduced with solution by Buffon in 1777 (Buffon 1777, pp. 100-104). Define the size parameter  $x$  by  $x=l/d$ .

A Diophantine equation is an equation in which only integer solutions are allowed. Hilbert's 10th problem asked if an algorithm existed for determining whether an arbitrary Diophantine equation has a solution. Such an algorithm does exist for the solution of first-order Diophantine equations. However, the impossibility of obtaining a general solution was proven by Yuri Matiyasevich in 1970

Two-Source Hypothesis [Mark-Q model] The dominant source theory among scholars today, the Two-Source Hypothesis (2SH) holds that Mark was the first gospel to be composed and became the primary narrative source for Matthew and Luke (Markan priority). In addition, Matthew and Luke independently supplemented their Markan material with sayings of Jesus from a lost sayings collection, termed Q.
