As seen in the picture and the video below, I start out with drawing the different types of waves and labeling the parts of each wave. I make sure to note that wavelength and amplitude are present in both types of waves. Then we move onto how each wave moves through a medium and how it is different for each type of wave.

Wavelength - Use the ruler above the wave (it can also be relocated) to measure from the crest of the first wave to the crest of the second wave. Record this value in the wavelength column for Trial 1 in the Data Table. Frequency - Press the Pause/Play button to restart the wave. Watch the waves move out the window.
