This type of word problem involves the use of known formulas. Usually we used one of the formulas for either volume or surface area, depending on what information was given, to solve for the radius or height of the cylinder. In one case, when the height and surface area are given, we were required to solve a quadratic equation for the value of r . If that expression had not factored easily, we ...

But if you have time, let me show you how to "Complete the Square" yourself. Completing the Square. Say we have a simple expression like $x^2 + bx$. Having x twice in the same expression can make life hard. What can we do? Well, with a little inspiration from Geometry we can convert it, like this:

Completing the Square - Math is Fun - Maths Resources

So our formula for the golden ratio above ($B^2 - B - 1 = 0$) can be expressed as this: $1a^2 - 1b - 1c = 0$. The solution to this equation using the quadratic formula is $(1 \pm \sqrt{5}) / 2$.

A typical problem involving the segments formed by secants and tangents in a circle gives us information about the measures of the secants and tangent and/or the segments formed when they intersect each other and the circle. Two examples of this type of problem are presented below.

Word Problems: Circles - Segments from Secants and Tangents

Geometry (from the Ancient Greek: γεωμετρία; geo-"earth", -metron "measurement") is a branch of mathematics concerned with questions of shape, size, relative position of figures, and the properties of space. A mathematician who works in the field of geometry is called a geometer.. Geometry arose independently in a number of early cultures as a practical way for dealing with lengths ...
