A right triangle is triangle with an angle of 90 degrees ($\pi/2$ radians). The sides a , b , and c of such a triangle satisfy the Pythagorean theorem $a^2 + b^2 = c^2$, (1) where the largest side is conventionally denoted c and is called the hypotenuse. The other two sides of lengths a and b are called legs, or sometimes catheti. The favorite A-level math exam question of the protagonist Christopher in ...

An isosceles triangle is a triangle with (at least) two equal sides. In the figure above, the two equal sides have length b and the remaining side has length a . This property is equivalent to two angles of the triangle being equal. An isosceles triangle therefore has both two equal sides and two equal angles. The name derives from the Greek *iso* (same) and *skelos* (leg).

In geometry, an isosceles triangle is a triangle that has two sides of equal length. Sometimes it is specified as having exactly two sides of equal length, and sometimes as having at least two sides of equal length, the latter version thus including the equilateral triangle as a special case. Examples of isosceles triangles include the isosceles right triangle, the golden triangle, and the ...

A triangle is a polygon with three edges and three vertices. It is one of the basic shapes in geometry. A triangle with vertices A , B , and C is denoted $\triangle ABC$. In Euclidean geometry any three points, when non-collinear, determine a unique triangle and simultaneously, a unique plane (i.e. a two-dimensional Euclidean space). In other words, there is only one plane that contains that triangle, and every ...

Introduction: Area is a measure of the amount of space contained inside a closed figure. Perimeter is a measure of the distance around a closed figure. We examine these concepts for triangles and several special quadrilaterals. The Lesson: We begin with the area and perimeter of a rectangle. A diagram below illustrates these concepts.
