Monohybrid, Dihybrid, and Trihybrid Crosses. Shading in each Punnett Square represents matching phenotypes, assuming complete dominance and independent assortment of genes, phenotypic ratios are also presented. Monohybrid Cross (one gene) ...

### **Punnett Square, Monohybrid, Dihybrid, and Trihybrid Crosses**

We begin with a study of the monohybrid cross, invented by Mendel. In a monohybrid cross, organisms differing in only one trait are crossed. Our objective is to understand the principles that govern inheritance in plants and animals, including humans, by solving problems related to the monohybrid cross.

### **Monohybrid Cross Problem Set - University of Arizona**

Genetics practice problems that use two traits found in rabbits, eye color and hair color. This version of the worksheet is easier because it sets up Punnett squares for students, which is ideal for beginning students of Mendelian genetics.
