Concurrent computing is a form of computing in which several computations are executed during overlapping time periods—concurrently—instead of sequentially (one completing before the next starts). This is a property of a system—this may be an individual program, a computer, or a network—and there is a separate execution point or "thread of control" for each computation ("process").

[MUSIC PLAYING] KARA REYNOLDS: My field especially is international trade policy, so I like to look at why do countries pass certain trade policies, and that's really looking more at the intersection of politics and economics. But then I also look at what impact do those trade policies have on firm decision making? MARY HANSEN: The agenda that takes up much of my time right now is a big program ...
