The rubber plant was observed with the highest rate of transpiration. Each species of plant has a transpiration rate ideal for its domestic environment. Higher transpiration rates may be indicative of a wetter climate, while lower transpiration rates may be used to conserve water in places like a desert where rainfall is minimal. 17.

#### **(Solved) Lab #3: Plant Transpiration Worksheet**

Transpiration Introduction Most of the water a plant absorbs is not used for a plant's daily functioning. It is instead lost through transpiration, the evaporation of water through the leaf surface and stomata, and through guttation, which is the loss of water from the vascular tissues in the margins of leaves. ...
