Table 1: The four levels/modes of processing. Figures 3, 4, and 5 show how within the processing model, cognition depends upon context. The effectiveness of the contribution of processing activities at each of these levels / modes, depends on the cognitive requirements posed by the specific context.

As shown in Table 1, the most-often used theories in the areas reviewed are SCT, the TTM/stages of change, the HBM, the TPB, and the PRECEDE/PROCEED planning model. These findings are similar to those in general reviews of the literature (above) and show that a small number of theories are being used to develop and test interventions.

The stages From the Big Bang to Integral I found simple symbolic scenes to express each level so that when we look at them we can get an immediate 'feel' of each stage in their respective quadrants. For instance, amber upper left is someone bathed in the shining light of an almighty god; orange upper right is a marathon runner reaching for high performance; lower right green is a new city ...
