The history of chemistry represents a time span from ancient history to the present. By 1000 BC, civilizations used technologies that would eventually form the basis of the various branches of chemistry. Examples include extracting metals from ores, making pottery and glazes, fermenting beer and wine, extracting chemicals from plants for medicine and perfume, rendering fat into soap, making ...

The latest membrane morphology emerging with the potential for future applications involves MMM,

consisting of organic polymer and inorganic particle phases, as shown schematically in Fig. 2. The bulk phase (phase A) is typically a polymer; the dispersed phase (phase B) represents the inorganic particles, which may be zeolite, carbon molecular sieves, or nano-size particles.

L'iodure de potassium est utilisé pour saturer la thyroïde d'iode non-radioactif lorsqu'on utilise des composés contenant de l'iode radioactif en médecine nucléaire, que ce soit pour diagnostic (imagerie médicale) ou pour traitement, et que la thyroïde n'est pas ciblée. C'est par exemple le cas de l'iobenguane (MIBG), utilisé aussi bien pour repérer de tissus tumoraux par ...

Earlier, biodegradation was defined as a decomposition of substances by the action of microorganisms. This action leads to the recycle of carbon, the mineralisation (CO_2 , H_2O and salts) of organic compounds and the generation of new biomass (Dommergues and Mangenot, 1972). At present, the complexity of biodegradation is better understood and cannot be easily summarised (Grima, 2002, Belal ...
