Transcript of Paleomagnetism and the Ocean Floor. North Atlantic Ocean = 77.8 km If both the distance that each ocean basin has opened and the time it took to open that distance are known, the rate of seafloor spreading can be calculated. Determine the rate of seafloor spreading for the South Atlantic Ocean basin in centimeters per year.

The main finding from mapping the magnetism of the ocean floor is that the ocean floor is created at mid-ocean ridges, more or less symmetricly spreads away from the ridges, and is finally subducted under continents or deep ocean troughs. It is the main evidence supporting plate tectonics. Related QuestionsMore Answers Below.

### **What does paleomagnetism prove about the ocean floor? - Quora**

The ancient magnetism, called paleomagnetism, present in rocks on the ocean floor can be used to determine the rate at which the plates are separating and, consequently, the time when they began to separate. Where plates separate along the mid-ocean ridge, magma from the mantle rises to the surface and creates new ocean floor.
