A normal distribution, sometimes called the bell curve, is a distribution that occurs naturally in many situations. For example, the bell curve is seen in tests like the SAT and GRE. The bulk of students will score the average (C), while smaller numbers of students will score a B or D. An even smaller percentage of students score an F or an A. This creates a distribution that resembles a bell ...

A standard normal distribution is a normal distribution with zero mean ($\mu=0$) and unit variance ($\sigma^2=1$), given by the probability density function and distribution function $P(x) = 1/(\sqrt{2\pi})e^{(-x^2/2)}$ (1) $D(x) = 1/2[\text{erf}(x/(\sqrt{2})) + 1]$ (2) over the domain x in $(-\infty, \infty)$. It has mean, variance, skewness, and kurtosis excess given by $\mu = 0$ (3) $\sigma^2 = 1$ (4) $\gamma_1 = 0$ (5) $\gamma_2 = 0$...

In Bayesian statistical inference, a prior probability distribution, often simply called the prior, of an uncertain quantity is the probability distribution that would express one's beliefs about this quantity before some evidence is taken into account. For example, the prior could be the probability distribution representing the relative proportions of voters who will vote for a particular ...

In statistics, a power law is a functional relationship between two quantities, where a relative change in one quantity results in a proportional relative change in the other quantity, independent of the initial size of those quantities: one quantity varies as a power of another. For instance, considering the area of a square in terms of the length of its side, if the length is doubled, the ...
