Bubble sort is not an easy sort algorithm for people to understand. From both my own experience and experience teaching, I can confidently say that insertion sort, selection sort, min-sort (minimum element sort), even (for some students) mergesort and quicksort are easier to understand — after all, they correspond to somewhat natural ways of sorting a list, but bubble sort is just artificial.

Here is a set of assignment problems (for use by instructors) to accompany the Divergence Theorem section of the Surface Integrals chapter of the notes for Paul Dawkins Calculus III course at

Lamar University.

Calculus III - Divergence Theorem (Assignment Problems)

Linear programming, sometimes known as linear optimization, is the problem of maximizing or minimizing a linear function over a convex polyhedron specified by linear and non-negativity constraints. Simplistically, linear programming is the optimization of an outcome based on some set of constraints using a linear mathematical model. Linear programming is implemented in the Wolfram Language as ...

Linear Programming -- from Wolfram MathWorld

In this formula, T_1 is the time it takes person 1, T_2 is the time it takes person 2, and T_t is the time it takes them when working together. This formula works no matter how many people are involved.
