The most prolific evidence of the Industrial Revolution's impact on the modern world is seen in the worldwide human population growth. Humans have been around for about 2.2 million years. By the dawn of the first millennium AD, estimates place the total world (modern) human population at between 150 - 200 million, and 300 million in the year 1,000.

The Population Bomb is a best-selling book written by Stanford University Professor Paul R. Ehrlich and his wife, Anne Ehrlich (who was uncredited), in 1968. It predicted worldwide famine in the 1970s and 1980s due to overpopulation, as well as other major societal upheavals, and advocated immediate action to limit population growth. Fears of a "population explosion" were widespread in the ...

Environmental Ethics. The field of environmental ethics concerns human beings' ethical relationship with the natural environment. While numerous philosophers have written on this topic throughout history, environmental ethics only developed into a specific philosophical discipline in the 1970s. This emergence was no doubt due to the increasing awareness in the 1960s of the effects that ...

The Importance of Temporal Data in Ecology. Although ecological processes can be studied with spatial patterns in populations, communities, and ecosystems, there are particular advantages of temporal data for ecology .Because temporal data are unidirectional (environmental changes must occur before their impacts are visible), they provide some of the best means of identifying causal relations ...

Mathematics, an international, peer-reviewed Open Access journal. In this paper, we prove a new fixed point theorem for a multi-valued mapping from a complete extended b-metric space  $U$  into the non empty closed and bounded subsets of  $U$ , which generalizes Nadler's fixed point theorem. We also establish some fixed point results, which generalize our first result.
