The periodic table, also known as the periodic table of elements, is a tabular display of the chemical elements, which are arranged by atomic number, electron configuration, and recurring chemical properties. The structure of the table shows periodic trends. The seven rows of the table, called periods, generally have metals on the left and non-metals on the right.

Periodic table - Wikipedia

Electromotive force, abbreviated emf (denoted and measured in volts), is the electrical action produced by a non-electrical source. A device that converts other forms of energy into electrical energy (a "transducer"), such as a battery (converting chemical energy) or generator (converting mechanical energy), provides an emf as its output. Sometimes an analogy to water "pressure" is used to ...
