The hybrid organic-inorganic halide perovskite (hybrid perovskite), most commonly denoted as $\text{CH}_3\text{NH}_3\text{PbI}_3$ (MAPbI_3), often has the A site occupied by an organic component. Similarly to its parent oxide perovskite, halide perovskites must obey allowable tolerance factors to achieve desired crystal symmetry.

Photosynthesis is a process used by plants and other organisms to convert light energy into chemical energy that can later be released to fuel the organisms' activities. This chemical energy is stored in carbohydrate molecules, such as sugars, which are synthesized from carbon dioxide and water - hence the name photosynthesis, from the Greek φῶς, phōs, "light", and σύνθεσις ...

Abiogenesis, or informally the origin of life, is the natural process by which life has arisen from non-living matter, such as simple organic compounds. While the details of this process are still unknown, the prevailing scientific hypothesis is that the transition from non-living to living entities was not a single event, but a gradual process of increasing complexity that involved molecular ...
