I have a file where there's a template sheet that needs to run some code when it's activated. This sheet is being duplicated to create sheets that don't need to run this code. Currently, I have the code to check for worksheet's codename when run so that it does nothing on extra sheets, but it still slows usage down when you switch between sheets.

How to clear the VBA code of a worksheet via a macro?

Binary floating point math is like this. In most programming languages, it is based on the IEEE 754 standard. JavaScript uses 64-bit floating point representation, which is the same as Java's double. The crux of the problem is that numbers are represented in this format as a whole number times a power of two; rational numbers (such as 0.1, which is 1/10) whose denominator is not a power of two ...

language agnostic - Is floating point math broken? - Stack ...

BOHR'S MODEL (Continued) Although Rydberg's equation was very accurate in its predictions of the wavelengths of hydrogen emission lines, for a long time no-one could explain why it worked - that is, the physical significance behind the equation. Bohr was the first to do so. In 1913, Niels Bohr proposed his model of the atom.
