The Periodic Table 127 Mendeleev's Periodic Table In the 1860s, Mendeleev was working on a textbook to use with his chemistry students. Because he needed to describe 63 elements, Mendeleev was looking for the best way to organize the information. He found a way to approach the problem while playing his favorite card game, a version of solitaire.

### 5.1 Organizing the Elements

locations of most elements in the periodic table. However, a few elements, including Te and I, did move. Although Te has a higher atomic mass than I, it has a lower atomic number. Thus, Mosely could place Te before I in the periodic table without disturbing the pattern of chemical properties. The modern periodic table has more than 100 elements,
