Biodiversity is not evenly distributed, rather it varies greatly across the globe as well as within regions. Among other factors, the diversity of all living things depends on temperature, precipitation, altitude, soils, geography and the presence of other species. The study of the spatial distribution of organisms, species and ecosystems, is the science of biogeography.

It has been suggested that bacterial endophytes are one step removed from specialized rhizosphere living bacteria, as they are able to interact in a very efficient way with their plant hosts (Ali et al., 2014a, Ali et al., 2014b). Thus, endophytes employ different mechanisms to gain entry into the plant tissues, particularly in roots (). Except for already established seed-endophytes (Truyens et ...
