A hydrogen atom is an atom of the chemical element hydrogen. The electrically neutral atom contains a single positively charged proton and a single negatively charged electron bound to the nucleus by the Coulomb force. Atomic hydrogen constitutes about 75% of the baryonic mass of the universe.. In everyday life on Earth, isolated hydrogen atoms (called "atomic hydrogen") are extremely rare.

Both are found, but there is no obvious difference in meaning. Similarity to is the preferred construction in both American and British English. The Corpus of Contemporary American English has 332 records for similarity to and 52 for similarity with. The figures for the British National Corpus show a less pronounced preference, but, with corresponding figures of 105 and 34, it is still significant.

In statistical mechanics, entropy is an extensive property of a thermodynamic system. It is closely related to the number Ω of microscopic configurations (known as microstates) that are consistent with the macroscopic quantities that characterize the system (such as its volume, pressure and temperature). Under the assumption that each microstate is equally probable, the entropy is the natural ...
