Piecewise functions are implemented in the Wolfram Language as `Piecewise[val1, cond1, val2, cond2, ...]`. Additional piecewise functions include the Heaviside step function, rectangle function, and triangle function.. Semicolons and commas are sometimes used at the end of either the left or the right column, with particular usage apparently depending on the author.

The inverse cos, sec, and cot functions will return values in the I and II Quadrants, and the inverse sin, csc, and tan functions will return values in the I and IV Quadrants (but remember that you need

the negative values in Quadrant IV). (I would just memorize these, since it's simple to do so). These are called domain restrictions for the inverse trig functions.

A function  $f(x)=c$  which does not change as its parameters vary. The function graph of a one-dimensional constant function is a straight line. The derivative of a constant function  $c$  is  $d/(dx)c=0$ , (1) and the integral is  $\int c dx=cx$ . (2) The Fourier transform of the constant function  $f(x)=1$  is given by  $F_x[1](k)=\int_{-\infty}^{\infty} e^{-2\pi i k x} dx = \delta(k)$ , (3) where  $\delta(k)$  is the delta function.
