Ecological Roles. Algae and diatoms use photosynthesis to manufacture food, absorbing carbon dioxide from the atmosphere and releasing oxygen. These protists are extremely numerous in the oceans and in fresh water, and so play an important role in maintaining the planet's oxygen levels, and storing carbon.

How are Protists Beneficial to Humans? (with pictures)

Assessment. To assess student understanding for this lesson, ask students to use the information on the Creature Cards they've collected and classify those organisms into the categories they think are appropriate.
