Property Of Parallelogram Chart Answers Property Of Parallelogram Chart Answers Area of Triangles Look at the following parallelogram. Look at the same parallelogram. The area of the triangle equals half of the area of the parallelogram. - A free PowerPoint PPT presentation (displayed as a Flash slide show) on PowerShow.com - id:

### Property Of Parallelogram Chart Answers

There are six important properties of parallelograms to know: Opposite sides are congruent ( $AB = DC$ ). Opposite angles are congruent ( $\angle A = \angle C$ ). Consecutive angles are supplementary ( $\angle A + \angle D = 180^\circ$ ). If one angle is right, then all angles are right. The diagonals of a parallelogram bisect each other.

### Properties of parallelograms (Geometry, Quadrilaterals ...)

The properties of the parallelogram are simply those things that are true about it. These properties concern its sides, angles, and diagonals. The parallelogram has the following properties: Opposite sides are parallel by definition. Opposite sides are congruent. Opposite angles are congruent. Consecutive angles are supplementary. The diagonals bisect each other.

### Properties of Parallelograms - dummies

If a quadrilateral is a parallelogram, then. (1) its opposite sides are congruent, (2) its opposite angles are congruent, and. (3) its consecutive angles are supplementary. Another important property worth noticing about parallelograms is that if one angle of the parallelogram is a right angle, then they all are right angles.
