In mathematics, a stiff equation is a differential equation for which certain numerical methods for solving the equation are numerically unstable, unless the step size is taken to be extremely small. It has proven difficult to formulate a precise definition of stiffness, but the main idea is that the equation includes some terms that can lead to rapid variation in the solution.

Fig. 1 illustrates the basic principles of MPTA where a heterogeneous adsorbent-adsorbate system is shown. The bulk phase gas, characterized by a uniform gas density ρ_B , is described using a real gas EOS. The adsorbed phase and all its thermodynamic properties, such as density, fugacity, pressure, and compressibility factor are functions of the potential $\epsilon(z)$.
