The geometric algebra (GA) of a vector space is an algebra over a field, noted for its multiplication operation called the geometric product on a space of elements called multivectors, which is a superset of both the scalars and the vector space. Mathematically, a geometric algebra may be defined as the Clifford algebra of a vector space with a quadratic form.

Geometric algebra - Wikipedia

In the event that the set in is an interval , the "subscript-superscript" notation from is usually adopted. Another generalization of the Riemann integral is the Stieltjes integral, where the integrand function defined on a closed interval can be integrated against a real-valued bounded function defined on , the result of which has the form

The divergence of a vector field F , denoted $\text{div}(F)$ or $\text{del} \cdot F$ (the notation used in this work), is defined by a limit of the surface integral $\text{del} \cdot F = \lim_{V \rightarrow 0} (\oint_{\partial V} F \cdot da) / V$ (1) where the surface integral gives the value of F integrated over a closed infinitesimal boundary surface $S = \partial V$ surrounding a volume element V , which is taken to size zero using a limiting process.
