An optical illusion, or visual illusion is characterised by visually perceived images that differ from objective reality. What does this mean? Basically the eyes see one thing, and the brain 'sees' something else.

**BrainBashers - Optical Illusions**

Best Answer: An optical illusion is characterized by visually perceived images that are deceptive or misleading [1]. Information gathered by the eye is processed by the brain to give a perception that does not tally with a physical measurement of the stimulus source. A conventional assumption is that there ...

**Optical Shop | Eye Exams - Queens NY, Optical Illusions**

Optical illusions MUST manifest in the perception of an image. Not in the sensation of the image, and not in the image's light delivery to the human eye. Looking at your face image in a distorted mirror is not an optical illusion. That is actual optics. Neil deGrasse Tyson says that optical illusions should really just be called "brain failures".

**hey do optical illusions really exist? | Yahoo Answers**

Optical Illusions. What is an Optical Illusion? Optical Illusions can use color, light and patterns to create images that can be deceptive or misleading to our brains. The information gathered by the eye is processed by the brain, creating a perception that in reality, does not match the true image.
