A black hole is a region of spacetime exhibiting gravitational acceleration so strong that nothing—no particles or even electromagnetic radiation such as light—can escape from it. The theory of general relativity predicts that a sufficiently compact mass can deform spacetime to form a black hole. The boundary of the region from which no escape is possible is called the event horizon.

Let's begin with a simple observation that will be a foundation for a much more in-depth study of the mammography imaging process. We can all agree on the objectives of the procedure. The challenge is in achieving the desired results. It begins with the fact that many pathologic conditions, especially cancer, produce very small physical changes that are difficult to visualize with x-ray imaging.
