5. Dimension 3 DISCIPLINARY CORE IDEAS—PHYSICAL SCIENCES. Most systems or processes depend at some level on physical and chemical subprocesses that occur within it, whether the system in question is a star, Earth's atmosphere, a river, a bicycle, the human brain, or a living cell. Large-scale systems often have emergent properties that cannot be explained on the basis of atomic-scale ...

Chemical compound - Functional groups: Chemists observed early in the study of organic compounds that certain groups of atoms and associated bonds, known as functional groups, confer specific reactivity patterns on the molecules of which they are a part. Although the properties of each of the several million organic molecules whose structure is known are unique in some way, all molecules that ...

A self-healing polymer has been developed by the authors and details of its healing mechanisms and proof of ability to heal fractures has recently been published [18,19]. In brief, this research demonstrated that on fractured surfaces, the polymer strongly anchors through hydrogen bonding and ionic Ca O bonds which results from the deprotonation of polymer hydroxyl groups while the polymer S S ...

Weathering is a set of physical, chemical and biological processes that alter the physical and chemical state of rocks and soil at or near the Earth's surface. Chemical weathering is the process by which rocks are decomposed, dissolved or loosened by chemical processes to form residual materials. Chemical reactions break down the bonds holding the rocks together, causing them to fall apart into ...

In chemistry and biology a cross-link is a bond that links one polymer chain to another. These links may take the form of covalent bonds or ionic bonds and the polymers can be either synthetic polymers or natural polymers (such as proteins).. In polymer chemistry "cross-linking" usually refers to the use of cross-links to promote a change in the polymers' physical properties.

Physical and chemical properties. Free bromine is a reddish brown liquid with an appreciable vapour pressure at room temperature. Bromine vapour is amber in colour. Bromine has a pungent odour and is irritating to the skin, eyes, and respiratory system. Exposure to concentrated bromine vapour, even for a short time, may be fatal.
