Critical point of a single variable function. A critical point of a function of a single real variable, $f(x)$, is a value x_0 in the domain of f where it is not differentiable or its derivative is 0 ($f'(x_0) = 0$). A critical value is the image under f of a critical point. These concepts may be visualized through the graph of f : at a critical point, the graph has a horizontal tangent if you ...

Dirichlet problem - m.blog.naver.com

The Dirichlet problem for Laplace's equation consists of finding a solution ϕ on some domain D such that ϕ on the boundary of D is equal to some given function. Since the Laplace operator appears in the heat equation, one physical interpretation of this problem is as follows: fix the temperature on the boundary of the domain according to the given specification of the boundary condition.
