The Mathematical Hacker. By Evan Miller. November 16, 2012 (Corrections) The programming profession is blessed with a number of gifted essayists. Today I will pick on three of my favorites — Eric Raymond, Paul Graham, and Steve Yegge — because they all seem to disagree about why (and whether) mathematics is relevant to the practicing programmer.

Logic programming is a type of programming paradigm which is largely based on formal logic. Any program written in a logic programming language is a set of sentences in logical form, expressing facts and rules about some problem domain. Major logic programming language families include Prolog, answer set programming (ASP) and Datalog. In all of these languages, rules are written in the form of ...

TerminateThread. Severity: potentially fatal This is always a bad idea. Always. It is to my deep embarrassment that in my early writings on threading, in Win32 Programming, I made the mistake of using this. At least I said that I knew it was a Bad Idea, but I was under a fair amount of pressure to finish the book, and was not as careful as I should have been.

The line bar = foo does not copy the contents of the variable, only its "object reference". To understand what is going on here, we need to know how lists are stored in the computer's memory. In 4.1, we see that a list foo is a reference to an object stored at location 3133 (which is itself a series of pointers to other locations holding strings). When we assign bar = foo, it is just the ...
