shareholders. We strive for continuous improvement with cutting-edge technology and service quality. Working as a team alongside our customers and partners, we deliver industry-leading solutions safely and efficiently.

**Leading through experience. - Select Energy Services**

The environmental impact of hydraulic fracturing is related to land use and water consumption, air emissions, including methane emissions, brine and fracturing fluid leakage, water contamination, noise pollution, and health. Water and air pollution are the biggest risks to human health from hydraulic fracturing. Research is underway to determine if human health has been affected, and adherence ...

**Environmental impact of hydraulic fracturing - Wikipedia**

Hydraulic fracturing in the United States began in 1949. According to the Department of Energy (DOE), by 2013 at least two million oil and gas wells in the US had been hydraulically fractured, and that of new wells being drilled, up to 95% are hydraulically fractured. The output from these wells makes up 43% of the oil production and 67% of the natural gas production in the United States.
