Projectile Practice Problems And Answers

Blast a car out of a cannon, and challenge yourself to hit a target! Learn about projectile motion by firing various objects. Set parameters such as angle, initial speed, and mass. Explore vector representations, and add air resistance to investigate the factors that influence drag.

Projectile Motion - Kinematics | Air Resistance ...

A projectile is any object that is given an initial velocity and then follows a path determined entirely by gravity. In this lesson, we will introduce projectile motion and touch on a few key ...

A projectile moves through the air with only the force of gravity acting on it, so the total energy of the projectile doesn't change. In this...

Conservation of Energy in Projectile Motion: Examples ...

Earlier in Lesson 6, four kinematic equations were introduced and discussed. A useful problemsolving strategy was presented for use with these equations and two examples were given that illustrated the use of the strategy. Then, the application of the kinematic equations and the problemsolving strategy to free-fall motion was discussed and illustrated.

Although quadratic equations are often used to find maximums and minimums for problems involving projectile motion, they can also be used to evaluate the path of a projectile at various time periods. For example, quadratic equations can be used to determine the height of a projectile at time "t" after the projectile has been released.

Kinetic energy is the energy of motion. An object that has motion - whether it is vertical or horizontal motion - has kinetic energy. There are many forms of kinetic energy - vibrational (the energy due to vibrational motion), rotational (the energy due to rotational motion), and translational (the energy due to motion from one location to another).

Effective Range is Across Multiple Shots Effective range is not typically considered a one-shot determination. The US military is reputed (can't find a direct cite here) to consider the range at which an average shooter has a 50% hit/miss ratio on a target to be the maximum effective range for that weapon and target size.
