Prokaryote Review Answer Key

This introduction to the structure of plant, animal and bacterial cells is accomplished with mobile-friendly interactive animations and descriptive text.

Interactive Cell Models - CELLS alive

Handouts created by the Amoeba Sisters that correspond to Amoeba Sisters videos. The handouts are application oriented and supplemental to the more important thing like creating in the classroom and hands on labs.

Amoeba Sisters Handouts

Most curricular materials in TeachEngineering are hierarchically organized; i.e., most hands-on activities are part of lessons, lessons are grouped into multiday curricular units and these again are bundled into subject areas. Some activities or lessons, however, were developed to stand alone, and hence, they might not conform to this strict hierarchy.

The electron transport chain is the final and most important step of cellular respiration. While Glycolysis and the Citric Acid Cycle make the necessary precursors, the electron transport chain is where a majority of the ATP is created. The Electron Transport Chain makes energy. The simple facts you should know about the electron transport chain are:

What is Bacteria? - Definition & Types - Video & Lesson ...

Biodiversity is not evenly distributed, rather it varies greatly across the globe as well as within regions. Among other factors, the diversity of all living things depends on temperature, precipitation, altitude, soils, geography and the presence of other species. The study of the spatial distribution of organisms, species and ecosystems, is the science of biogeography.

Biodiversity - Wikipedia

Biological electron microscopy progressed slowly by accretion of large and small improvements and knowledge (see the review of Holt and Beveridge, 1982). For example, the complex technique of sectioning depends on the design of ultramicrotomes and knifes, fixatives, buffers, embedding resins, and finally the mounting and staining of specimens.

Plastids . Plastid is another important energy transducing cell organelle found only in plants. Shimper coined the name Plastids for those structures responsible for photosynthesis.

Plastids - Plant Cell Biology For Masters- by G. R. Kantharaj

The evolution of sexual reproduction describes how sexually reproducing animals, plants, fungi and protists could have evolved from a common ancestor that was a single celled eukaryotic species. There are a few species which have secondarily lost the ability to reproduce sexually, such as Bdelloidea, and some plants and animals that routinely reproduce asexually (by apomixis and ...
