Chemistry is the scientific discipline involved with elements and compounds composed of atoms, molecules and ions: their composition, structure, properties, behavior and the changes they undergo during a reaction with other substances.. In the scope of its subject, chemistry occupies an intermediate position between physics and biology. It is sometimes called the central science because it ...

Fluorescence quenching rate constants, k q, ranging from 10 6 to 2×10 10 M -1 sec -1, of more than 60 typical electron donor-acceptor systems have been measured in de-oxygenated acetonitrile and are shown to be correlated with the free enthalpy change, ΔG 23, involved in the actual electron transfer process . in the encounter complex and varying between + 5 and -60 kcal/mole.

Nitrous acid is useful for destroying sodium azide solutions, which are toxic and potentially explosive. It can also be used to prepare diazonium salts, which combine with anilines and phenols to form brightly colored azo compounds. The latter type of reaction can be used to produce azodyes, as well as serving as a qualitative test for aromatic amines.

Any alkali added to the solution is consumed by the hydronium ions. These ions are mostly regenerated as the equilibrium moves to the right and some of the acid dissociates into hydronium ions and the conjugate base. If a strong acid is added, the conjugate base is protonated, and the pH is almost ...

Punkt izoelektryczny (pl, pH(l)) – wartość pH, przy której populacja cząsteczek amfolitycznych, tj. posiadających kationowe i anionowe grupy funkcyjne (np. aminokwasy białkowe), zawiera średnio tyle samo ładunków dodatnich co ujemnych, na skutek czego ładunek całkowity całej populacji wynosi zero. Stężenie jonu obojnaczego przyjmuje wtedy maksymalną wartość, a stężenia form ...

1. Introduction "Heavy metal" is a general collective term, which applies to the group of metals and metalloids with atomic density greater than 4000 kg m-3, or 5 times more than water (Garbarino et al., 1995) and they are natural components of the earth's crust. Although some of them act as essential micro nutrients for living beings, at higher concentrations they can lead to severe ...
