Introduction Of the many different antenna projects I have built for HF, the most interesting and rewarding project was the small transmitting loop. After consulting many of the available Internet sources, and by combining ideas, I was able to assemble an antenna that performed well, even under poor band conditions.

Tower Cam: HSC had a special on mini CCD cameras, so I thought it would be useful to put a camera on the tower to see what (trees) my antennas were pointing through. To protect it from the Sun, a solenoid-driven shutter was rigged over the lens. A 3"x6" box from Radio Shack and some clear plastic from a CD cover makes it weatherproof.

Beverage antennas do not require re-tuning to QSY or switch bands, because they are non-resonant. The design we use covers 100 KHz to 30 MHz without retuning a thing or even having to adjust the signal level.

EFHW-8010 Multi-Band End Fed Half Wave Antenna. This is an End-Fed Half-Wave (EFHW*) antenna for 80/40/30/20/17/15/12 and 10m bands. Unlike many END FED antennas on the market, this one does not require the Antenna Tuner to operate.

Maxwell's equations are a set of coupled partial differential equations that, together with the Lorentz force law, form the foundation of classical electromagnetism, classical optics, and electric circuits.The equations provide a mathematical model for electric, optical, and radio technologies, such as power generation, electric motors, wireless communication, lenses, radar etc. Maxwell's ...

I am not an expert on aerial design, I just test them and know what works. In my experience, for a given number of elements, the highest peak gain figures are achieved by the conventional Yagi.The next highest efficiency is the Double Yagi, followed by the X Beam and in last place is the Tri Boom, in fact anyone who knows about aerials knows Tri Booms are not made to work, they`re made to sell ...

Array processing is a wide area of research in the field of signal processing that extends from the simplest form of 1 dimensional line arrays to 2 and 3 dimensional array geometries. Array structure can be defined as a set of sensors that are spatially separated, e.g. radio antenna and seimic arrays.The sensors used for a specific problem may vary widely, for example microphones ...

The first and most important point is that genetic algorithms are intrinsically parallel. Most other algorithms are serial and can only explore the solution space to a problem in one direction at a time, and if the solution they discover turns out to be suboptimal, there is nothing to do but abandon all work previously completed and start over.

Notepad++ is a great editor... The regular expression facility is stunted, but I can live with that. It is OK for most find/replace situations, and for the occasional others I'll just hop across to UltraEdit (Unicode) or TextPad (ASCII only).. However, I can't live without a hex editor on tap!
