Relative Risk (RR) is often used when the study involves comparing the likelihood, or chance, of an event occurring between two groups. Relative Risk is considered a descriptive statistic, not an inferential statistic; as it does not determine statistical significance. Relative Risk utilizes the probability of an event occurring in one group compared to the probability of an event occurring in ...

Aim of Course: This online course, "Statistics 1 Probability and Design" is the first of a 3-course sequence, that provides an introduction to statistics for those with little or no prior exposure to basic probability and statistics. Its simulation/resampling approach (drawing numbers or data from a hat) demystifies the traditional formulas, demonstrating the fundamental basis for statistical ...
