Object Types (Blueprints) (Classes) The examples from the previous chapters are limited. They only create single objects. Sometimes we need a "blueprint" for creating many objects of the same "type".The way to create an "object type", is to use an object constructor function.. In the example above, function Person() is an object constructor function. ...

The compareTo method is the sole member of the Comparable interface, and is not a member of Object.However, it's quite similar in nature to equals and hashCode.It provides a means of fully ordering objects. Implementing Comparable allows: . calling Collections.sort and Collections.binarySearch; calling Arrays.sort and Arrays.binarySearch; using objects as keys in a TreeMap

Java Practices->Implementing compareTo

This is just convention. In fact, even the name main(), and the arguments passed in are purely convention. When you run java.exe (or javaw.exe on Windows), what is really happening is a couple of Java Native Interface (JNI) calls.

Chapter 6 The Secret Life of Objects. An abstract data type is realized by writing a special kind of

program [...] which defines the type in terms of the operations which can be performed on it.

The Secret Life of Objects :: Eloquent JavaScript
All objects have both identity (the object's location in memory) and state (the object's data). The == operator always compares identity. The default implementation of equals compares identity as well.. Sometimes the default implementation of equals has the desired behaviour (as in a type-safe enumeration, for example), but equals should usually compare state, not identity.

Java Practices->Implementing equals
